

A proposal for classifying land-use

Richard Law

Outline

- Why do this again?
- Classification “framework” vs classification “system”
- Māori engagement
- Proposal for a NZ land use classification system
- What’s next?

	D ₁	D ₂
A	Milk	Cows
B	Olives	Orchard
C	Hemp	Crop
D	Milk	Sheep
E	Bio-Fuel	Sheep

This old chestnut

Why are land-use classification systems unimplemented, or unenduring?

First Digit.		Second Digit.	
Contemporary Land Use.		Farm and Station Crops, Stock and Economy.	
1. Agricultural Land (ploughed in farm year of survey). 2. Pasture Land (in rotation where grass exceeds other crops in area). 3. Pasture Land (permanent and semi-permanent). 4. Native Grassland (mainly tussock) (4) depleted (<i>Raoultia</i>). (4) deteriorated. 5. Scrub, Fern and Exotic Weeds. 6. Forest Land (native and exotic). 7. Unused (and not covered by other classes yet suitable for some form of use—e.g., afforestation, recreation). 8. Unused (not suited to economic use of any kind). 9. Built-up Urban Area. 0. Land outside Urban Areas occupied by Manufacturing or Mining Enterprises.		A. Cereals. B. Root, Pulse and Green Fodder Crops (including main crop potatoes). C. Grass and Clover for Seed. D. Orchardling. E. Market Gardening and Nurseries. F. Other Intensive Crops (early potatoes, onions, tobacco, hops, etc.). G. Store Sheep. H. Sheep Breeding and Rearing. J. Fattening of Sheep and Lambs. K. Dairying. L. Station Cattle. M. Pigs and/or Poultry.	
Third Digit.		Fourth Digit.	
Amount of Idle Land.		Amount of Land rendered Unproductive by Weeds.	
1. Little. 2. Limited. 3. Considerable. 4. Excessive.		1. Little. 2. Limited. 3. Considerable. 4. Excessive.	
Fifth Digit.	Sixth Digit.	Seventh Digit.	
Quality of Farmstead, Buildings, Plantations, Shelter, Equipment, Fences, etc.	Kind of Native and Exotic Weeds Present.	Size of Holdings.	
1. Excellent. 2. Good. 3. Medium. 4. Poor. 5. Very Poor.	1. Fern. 2. Manuka. 3. Other Natives. 4. Gorse. 5. Broom. 6. Blackberry. 7. Wild Briar. 8. Ragwort. 9. Other Exotic	1. Very large [(1) excessive]. 2. Large [(2) excessive]. 3. Medium. 4. Small. 5. Very small [(5) too small].	

Cumberland, KM. (1944). The survey and classification of land in New Zealand: a basis for planning, Transactions of the Royal Society of New Zealand, 75:2, 185-195.

Classification framework — Principles

1. Prioritise atomic data.
2. Be specific about purpose and scope.
3. Ensure extensibility.
4. Use hierarchies where they are appropriate, required, and logically consistent.
5. Improve over time.
6. Prioritise reproducible and transparent methodologies.
7. Accommodate multiple land uses.

<https://github.com/manaakiwhenua/nzsluc>

Classification framework — Best practices

1. Purpose
2. Scope
3. Extensibility
4. Description of data quality
5. Semantic versioning
6. Metadata
7. Compatibility and re-use
8. Definition of land
9. Primary land use
10. Provenance

<https://github.com/manaakiwhenua/nzsluc>

“There has been limited Māori participation in previous land-use frameworks and classifications, largely neglecting Māori cultural aspirations, knowledge, values, priorities and interests.

Māori would like to see a long-term national land use classification reflect their values, knowledge systems, and interests to support decision-making, planning and policy, especially at tribal, sector, and enterprise level.” (Harcourt et al., 2024)

Harcourt, N, Finlay-Smiths, S, Harmsworth, G, Awatere, S, Harris, L. 2024. Preliminary findings information synthesis: Māori perspectives about a land use classification framework. Manaaki Whenua – Landcare Research Contract Report LC4444.

1 Conservation and minimal use of natural environments

- 1.1.0 Biodiversity protection
- 1.2.0 Cultural and natural heritage
- 1.3.0 Minimal use from relatively natural environments
- 1.4.0 Unused land and land in transition

2 Production agriculture and plantations

- 2.1.0 Plantation forests
- 2.2.0 Grazing modified pasture systems
- 2.3.0 Short-rotation and seasonal cropping
- 2.4.0 Perennial horticulture
- 2.5.0 Intensive horticulture
- 2.6.0 Intensive animal production
- 2.7.0 Water and wastewater
- 2.8.0 Land in transition

3 Built environment

- 3.1.0 Residential
- 3.2.0 Public recreation and services
- 3.3.0 Commercial
- 3.4.0 Manufacturing and industrial
- 3.5.0 Utilities
- 3.6.0 Transport and communication
- 3.7.0 Mining
- 3.8.0 Waste treatment and disposal
- 3.9.0 Vacant and transitioning land

1 Governance and strategic use of natural environments

- 1.1.0 Sustainability position
- 1.1.1 High degree of biodiversity protection
- 1.1.2 Medium to high degree of biodiversity protection
- 1.1.3 Medium degree of biodiversity protection
- 1.1.4 Medium to low degree of biodiversity protection
- 1.1.5 Low degree of biodiversity protection

- 1.2.0 Cultural ecosystem heritage
- 1.2.1 Indigenous cultural heritage
- 1.2.2 Cultural heritage
- 1.2.3 Natural heritage

- 1.3.0 Wooded and forested areas, forest ecosystems
- 1.3.1 Surface water quality
- 1.3.2 Groundwater
- 1.3.3 Diving water vegetation
- 1.3.4 Production from indigenous vegetation
- 1.3.5 Disturbance use
- 1.3.6 Deforestation
- 1.3.7 Environmental & recreational protection
- 1.3.8 Carbon stocks

- 1.4.0 Opened land and land restoration
- 1.4.1 Opened land
- 1.4.2 Land revegetation/ restoration

2 Productive agriculture and plantations

- 2.1.0 Pasture systems
- 2.1.1 Exotic plantation forestry
- 2.1.2 Indigenous plantation forestry
- 2.1.3 Other production uses
- 2.1.4 Planned environmental & silvicultural practices
- 2.1.5 Permanent carbon forest

- 2.2.0 Daring modified pasture systems
- 2.2.1 Dairy
- 2.2.2 Intensive dry stock
- 2.2.3 Extensive dry stock

- 2.3.0 Dismantled commercial cropping
- 2.3.1 Arable cropping
- 2.3.2 Arable and mixed forests & cropping
- 2.3.3 Non-arable cropping
- 2.3.4 Structural forests and silviculture for farming

- 2.4.0 Pastoral rangelands
- 2.4.1 Tree trees
- 2.4.2 Vine trees
- 2.4.3 Other perennial horticulture

- 2.5.0 Indigenous horticulture
- 2.5.1 Production horticulture
- 2.5.2 Ornamental horticulture

- 2.6.0 Indigenous aquatic production
- 2.6.1 Aquatic production
- 2.6.2 Paddy rice
- 2.6.3 Pigeons
- 2.6.4 Pigeon traps
- 2.6.5 Aquaculture

- 2.7.0 Wines and wineries
- 2.7.1 Still wine
- 2.7.2 Effluent pond
- 2.7.3 Water treatment - land application
- 2.7.4 Water treatment - wetland
- 2.7.5 Wastewater treatment plant effluent

- 2.8.0 Land in transition
- 2.8.1 Unsettled degraded land
- 2.8.2 No settled use
- 2.8.3 Land revegetation/ restoration
- 2.8.4 Abandoned land

3 Built environment

- 3.1.0 Residential
- 3.1.1 High density residential
- 3.1.2 Medium density residential
- 3.1.3 Low density residential
- 3.1.4 Rural residential

- 3.2.0 Public, commercial and industrial
- 3.2.1 Outdoor recreation
- 3.2.2 Indoor recreation
- 3.2.3 Community services

- 3.3.0 Commercial
- 3.3.1 Retail
- 3.3.2 Office
- 3.3.3 Warehouse
- 3.3.4 Entertainment
- 3.3.5 Healthcare
- 3.3.6 Transportation & warehousing

- 3.4.0 Manufacturing and resources
- 3.4.1 General purpose factory
- 3.4.2 Food processing factory
- 3.4.3 Major industrial complex
- 3.4.4 Special
- 3.4.5 Farm buildings/ infrastructure
- 3.4.6 Agriculture

- 3.5.0 Utilities
- 3.5.1 Fuel powered electricity generation
- 3.5.2 Hydroelectricity generation
- 3.5.3 Wind electricity generation
- 3.5.4 Solar electricity generation
- 3.5.5 Electricity substations and transmission
- 3.5.6 Gas treatment, storage and transmission
- 3.5.7 Water supply and transmission

- 3.6.0 Transport and communication
- 3.6.1 Agriculture/ horticulture
- 3.6.2 Retail
- 3.6.3 Hospitality
- 3.6.4 Public and social services
- 3.6.5 Government and communication

- 3.7.0 Mining
- 3.7.1 Mines
- 3.7.2 Quarries
- 3.7.3 Tunnels
- 3.7.4 Exploration/ survey
- 3.7.5 Extractive industry use/ reuse

- 3.8.0 Waste treatment and disposal
- 3.8.1 Landfills
- 3.8.2 Transfer stations and recycling facilities
- 3.8.3 Municipal waste transfer
- 3.8.4 Wastewater treatment - land application
- 3.8.5 Stormwater management

- 3.9.0 Vacated land/ decommissioned sites
- 3.9.1 Vacant lots
- 3.9.2 Greenfield development
- 3.9.3 Brownfield development

2. Production agriculture and plantations

This class includes land used principally for primary production, where native vegetation has largely been replaced by introduced species through clearing, the sowing of new species, the application of fertilisers or the dominance of volunteer species. The range of activities in this category includes plantation forests, pasture production for stock, cropping and fodder production, and a wide range of horticultural production. If there is evidence of irrigation infrastructure or water-take consents, land should have irrigation listed as a management practice, even if it appears that irrigation water has not been recently applied.

Fallow or ploughed land should be assigned to the most likely land use based on the dominant activity conducted in comparable nearby areas or other available evidence. Fallow or ploughed land should be allocated to the relevant pasture, cropping or horticultural class (rather than using land in transition). The fallow or ploughed status should be recorded in the management field.

► Expand

i. Plantation forests

This is land on which plantations of trees or shrubs (native or exotic species) have been established (i.e. planted) for production, or environmental and resource protection purposes. This includes farm forestry and may consist of monocultures or mixed species. Specific additional attributes that could be captured are plantation age, rotation number, and species.

- a. **Exotic plantation forestry** – an area managed for pulpwood or saw-log production (exotic species).
- b. **Indigenous plantation forestry** – an area managed for pulpwood or saw-log production (native species).
- c. **Other production uses** – an area managed for non-pulpwood production, including oil, wildflowers, honey (e.g. kānuka/mānuka plantations).
- d. **Planted environmental & infrastructure protection** – an area managed for environmental and indirect production uses (e.g. prevention of land
- e. **Permanent carbon forest** – an area planted with indigenous or exotic trees for the purpose of gaining carbon credits (carbon farming).

ii. Grazing modified pasture systems

This class includes grazing pasture and/or forage, both annual and perennial, based on significant active modification or replacement of the natural vegetation. Land under pasture at the time of mapping may be in a rotation system, so that at another time the same area may be, for example, under cropping.

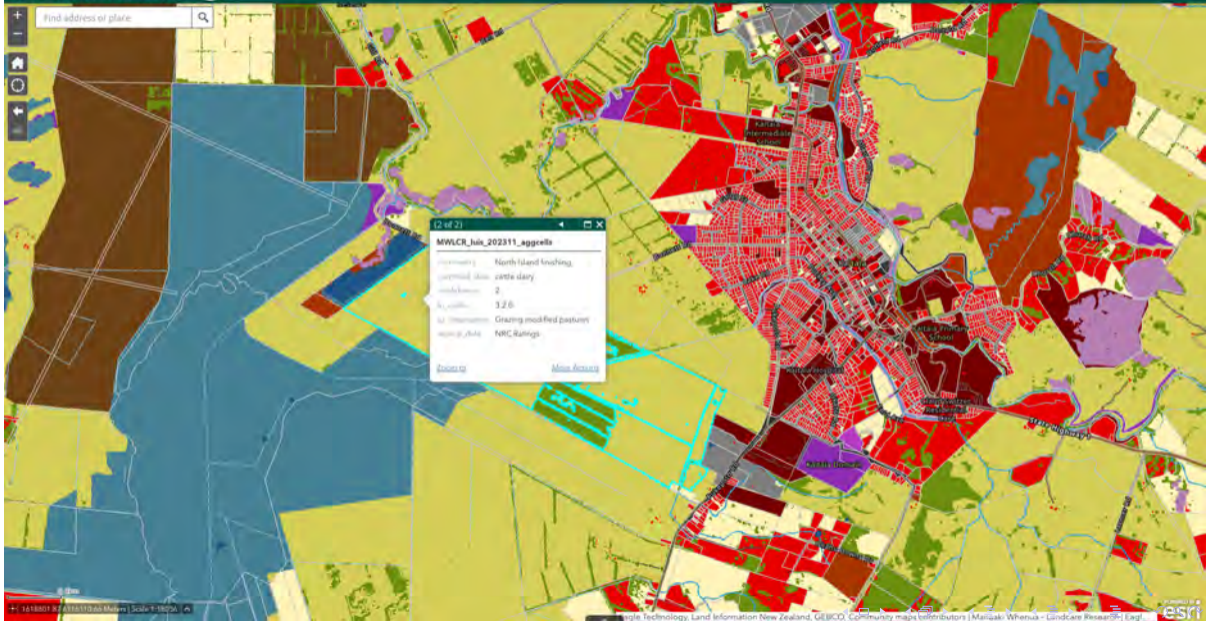

The ability to distinguish between dairy and dry-stock production is provided by including the relevant commodity information, such as cattle dairy, cattle beef, sheep wool, sheep meat, etc. Multiple commodities should be recorded if appropriate. Crops used in rotation should also be recorded as commodities, if known.

Dairy support is land that is used to support non-lactating dairy stock (dry cows, heifers and calves). It will include any feed required, and will often include winter crops and potentially summer crops (location/irrigation dependent), along with cereal crops, such as maize, barley, and wheat. It can also include feed that is cut and carried to the milking platform. Dairy support land that is not actively used for grazing should be classified as an arable use.

- a. **Dairy** – the land on which milking cows (or other stock, such as goats or sheep) are grazed during the milking season. Dairy production systems can include rotations of grazed forage crops and maize for silage, and dry-stock grazing, but this class should only be used where dairy is the primary purpose of the land. Where the land is permanently used for dry-stock grazing, it should be classified under dry-stock land use.

Attributes

Attribute	Explanation	Example
Commodity	Commodity names	dairy cattle
Mgmt practices	Processes on land	irrigation spray
Tenure	Estate in land	leasehold
Zoning	Council zones	rural lifestyle
Land cover	Land cover at time of mapping	mānuka
Permeability	Permeability to water	unsealed
Water	Type of water feature (if not land)	lake
